

BROTHER ENGINEERING LTD

Panel Shop Press

Quickest and easiest way to punch burr-free cuts in your doors, gland plates and DIN rail. On average 60 times faster than sawing and filing.

- Very large components can be accommodated, particularly tools that would require a large throat depth in a 'C' frame press
- The frame is balanced - it does not gap under load; better for piercing and blanking operations
- The frame is extremely robust. Typically three times as stiff as the 'C' frame version - an advantage for blanking and piercing operations and much quieter
- Ram load constant throughout power stroke
- Long overall stroke provides excellent access
- Quick tool setting - fast tool alignment; tool height not critical
- Top quality steel used for cutting tools for a long lasting cutting edge
- Holes. Square, key hole, Dsub and many more punches and dies available
- PLC Control
- Cat 4 safety light guards
- CE marked
- High standard of build quality
